

Weekly meeting progress

Friday, Aug 21, 2026

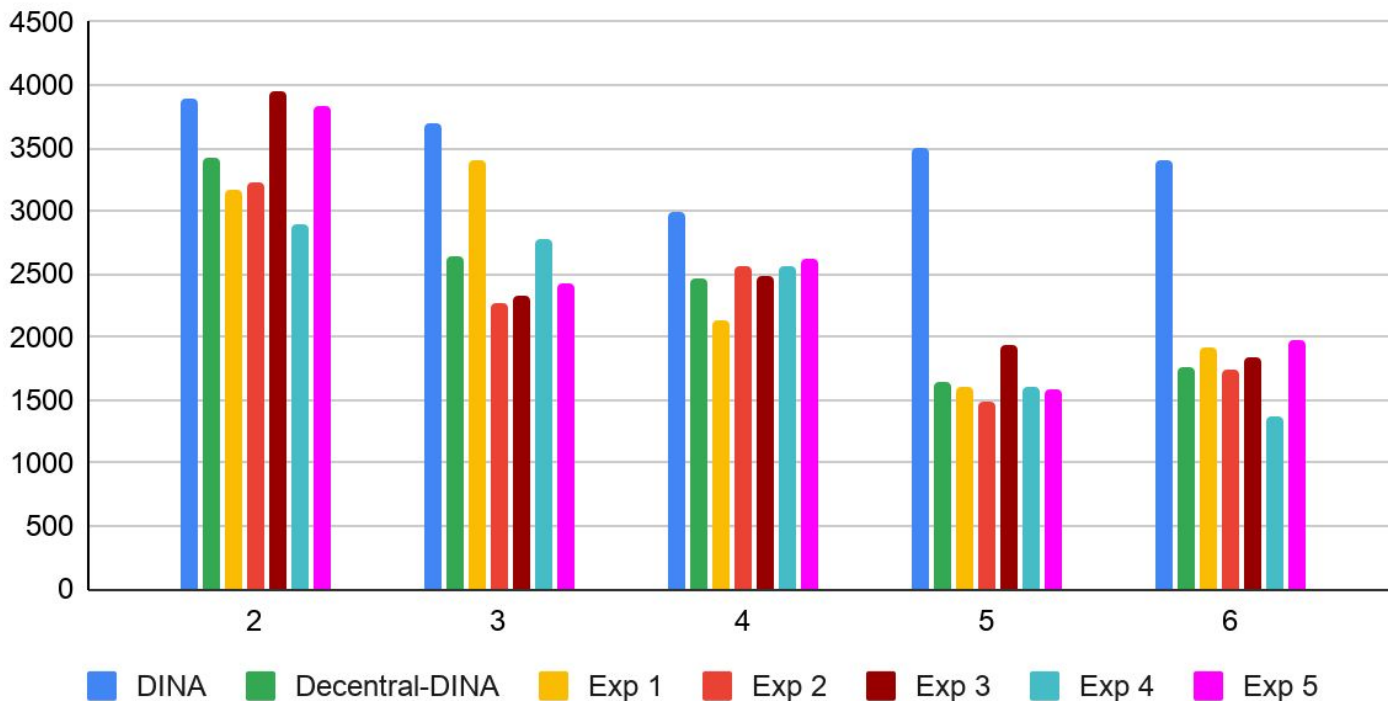

TPC-H query workload execution time in second (1,100 queries), by number of nodes, using TPC-H sf 10 database

TPC-H query workload execution time in seconds (1,100 queries) for each individual experiment run by number of nodes, using TPC-H SF 10

What did I do this week?

- Execute the training 3 times for each TPC-H database at SF 30 and SF 100
- Automate the project launch on CloudLab using Sam's Python script
- Continue writing the internship report

Next tasks

- Run the TPC-H benchmark for SF 30 and SF 100
- Choose a project name
- Continue writing the final internship report
