TPC-H Query Workload Execution Time in Seconds (averaged over 5 Runs, 1,100 queries) by Number of Nodes on TPC-H 10 GB Database

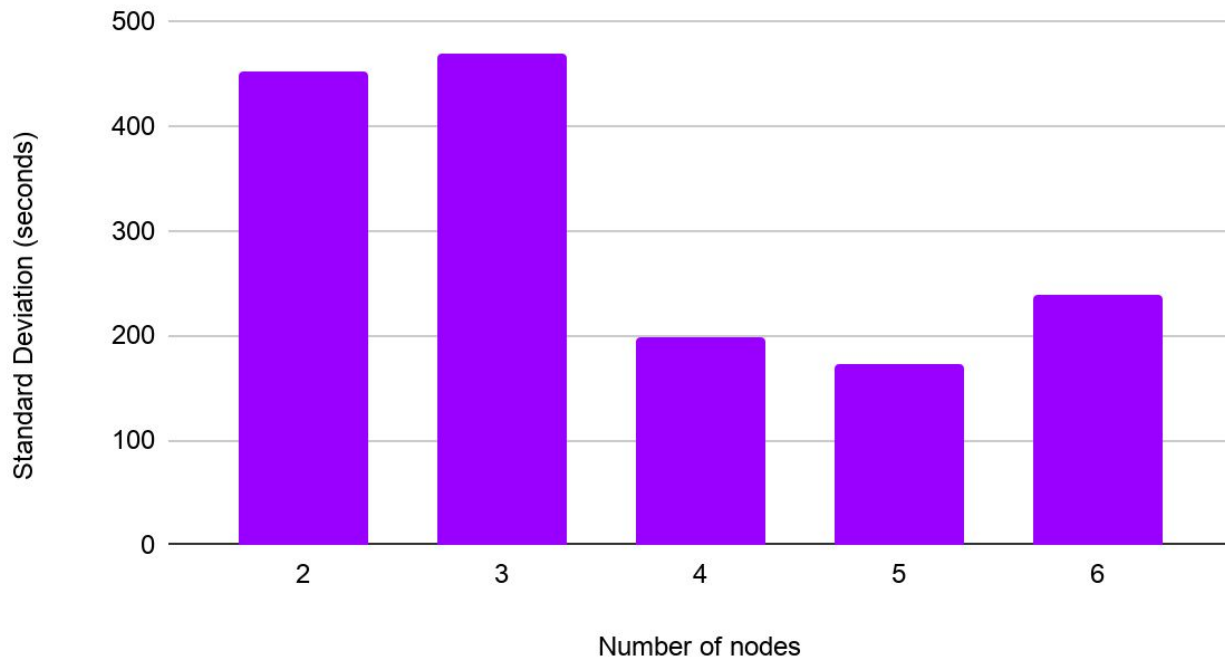

TPC-H query workload execution time in seconds (1,100 queries) for each individual experiment run by number of nodes, using TPC-H 10 GB

Standard deviation of query execution times in second across the 5 experimental runs by number of database nodes

After the internship

- Run the TPC-H benchmark for 30 GB database and 100 GB database
- Sharing this first version of my internship report
